**Subject:** Re: Additional question

I haven't heard the Dow posted their PPh tox information. Seems plausible since they have been very helpful but I haven't seen any public posting information yet myself.

I think some info is getting garbled in translation somewhere with the other question. ATSDR received Dow's PPh tox study information over the weekend. We are not doing any lab analyses so we do not have any "samples" from Dow. Dow was offering to provide diPPh analytical standards (not samples) to any of the interested labs working on this since this compound is not part of the NIST standards library - I think your Fort Meade lab was interested in this but I don't know if you got one from them or not. Maybe that is what this question is about?

Lora

**Subject:** Additional question

OCIR has received another question from Rockefeller staff,

We're hearing that Dow may have posted the information on PPH even though its proprietary. Have you heard this as well or happen to know where that information would be?

Have we heard this directly or second hand from ATSDR (or not at all)? I understand that ATSDR may have received samples from Dow but this is another question. I continue to be grateful for your assistance with these inquiries. Thanks! Linda
